

# SECURE E-MAIL GATEWAY

Thanks to SEPPmail's secure e-mail solution, inexpensive, secure, GDPR-compliant e-mail communication is now a reality. The multi-award-winning platform enables secure and user-friendly e-mail communication, which is also both cost-efficient and future-oriented too. It is the result of SEPPmail's many years of experience with technology and applications as well as the consistent implementation of a pioneering system architecture.

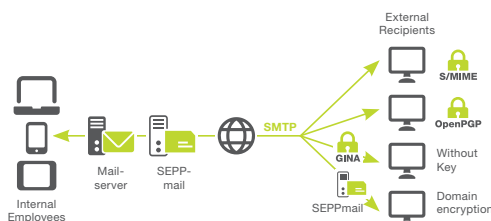

SEPPmail's Secure E-Mail Gateway automatically encrypts all of a business's confidential e-mail traffic. This guarantees that messages can only be read by the individuals for whom they are intended. In addition to transparent S/MIME and OpenPGP encryption, SEPPmail also supports the secure exchange of messages with recipients who do not have a key, through the use of the GINA interface. Domain encryption managed by SEPPmail, cloud and Office 365 integrations as well as other options round off the solution's ability to provide maximum user-convenience.

## THE HIGHLIGHTS AT A GLANCE

- No confidential email leaves the company unencrypted
- Transparent encryption with S/MIME, OpenPGP and TLS
- Domain encryption: out-of-the-box encryption with hundreds of thousands of other SEPPmail users
- GINA technology for the encryption of e-mail to everyone (spontaneous encryption)
- Automatic exchange of keys
- Smooth integration into existing infrastructure (e.g. connection to internal active directory)
- In-house email encryption or end-to-end encryption
- Ruleset can be adapted to internal processes
