## CONTENT AND IDENTITY PROTECTION - SIMPLE, SECURE

# SECURE DIGITAL COMMUNICATION

The business environment is just the same as our personal lives: relationships are based on trust. However, when it comes to electronic communication, all of this often falls by the wayside. SEPPmail is committed to making e-mail communication secure and to protecting both content and identities.

To maximize e-mail security, SEPPmail relies on its own encryption architecture and, thanks to the ex-ceptional reliability of its Secure E-Mail Gateway, is able to offer the most complete, most secure and user-friendly

e-mail encryption solution available. This solution guarantees that at no time can cyber criminals have access to e-mail communications and that e-mail messages are consistently signed through digital certificates and fully RFC-compliant. This way, both the authenticity of the sender and of the recipient is guaranteed, as well as the integrity of the transmitted content - without burdening sender or recipient with technical and administrative hurdles. You can find out how this works at www.sepp-mail.ch/online-demo/.

# SEPPMAIL STANDS FOR:

### SECURITY

SEPPmail encrypts and signs emails according to international standards such as S/MIME and OpenPGP. The signature ensures the authenticity of the sender. The encryption ensures that no third party can read or modify confidential e-mails. SEPPmail always uses the encryption technology which is best suited for the recipient. This offers both security and excellent user-friendliness.

### RELIABILITY

SEPPmail signs and encrypts millions of emails every day. Once an e-mail is marked as confidential, it only leaves the company in encrypted form. It cannot be manipulated or read by third parties either during transmission or when it is received.

### INNOVATION

Thanks to the GINA procedure, users of the SEPPmail Secure E-mail Gateway are able to send encrypted e-mails to recipients who do not use encryption software and do not have a key. The GINA procedure's encryption takes place according to the latest and most secure public key standards and does not require any software installation - for the sender or the recipient. E-mails can be received through their usual e-mail program and are decrypted by entering a password.

This process is unique in the world and has ear-ned SEPPmail several technology awards. It enables the secure and confidential exchange of information in the simplest possible way.

### EXPERT KNOWLEDGE

SEPPmail has been focusing solely on secure e-mail and data communication since 2001. We are happy for you to take advantage of our exhaustive expert knowledge at any time. We also support you with comprehensive assistance services. Professional. Quick. Skilful.

## CUSTOMER FOCUS

At SEPPmail, you come first. We are quick and reliable when it comes to customer needs and market developments. We provide you with new functionality through short release cycles. Whilst developing our products and services, our primary thoughts are of you and your work processes. Obviously, we also like to inform you in good time about upcoming software changes. And we listen to you - so that we are best-placed to fully address your concerns for the future.

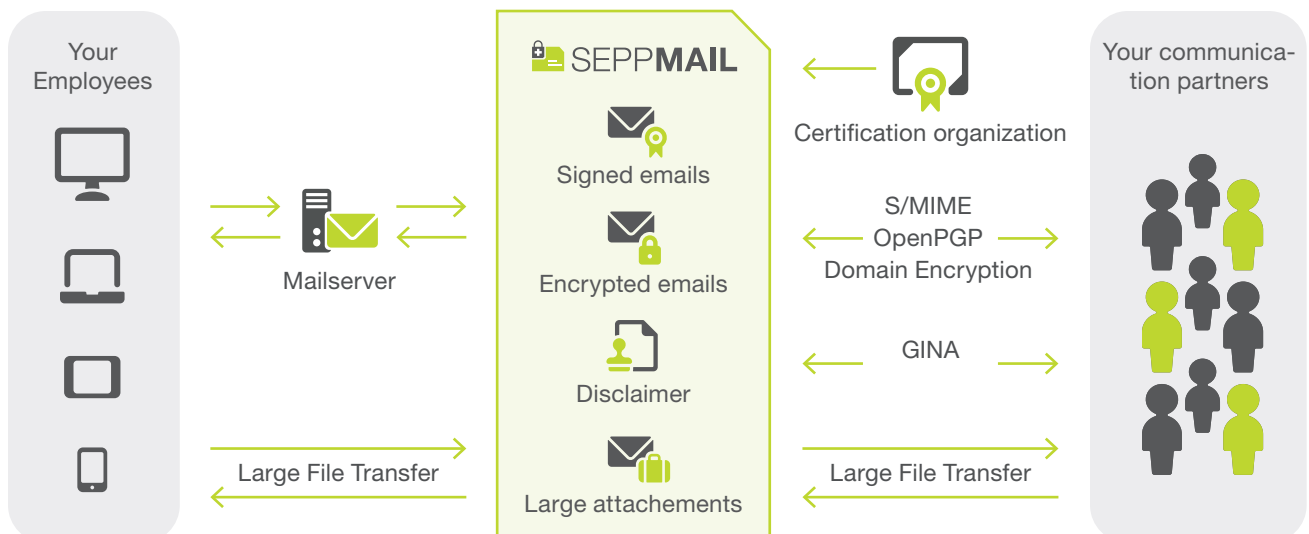

## SEPPMAIL - WE CREATE PRIVACY WITHIN COMMUNICATION

Since its foundation in 2001, SEPPmail, based in Neuenhof (AG) and Brunnthal near Munich, has focused on the development and international distribution of pioneering solutions for secure e-mail communication. Thanks to the combination of our innovation strengths, expert knowledge and commitment, we are currently consolidating our position as the market leader for easy-to-use secure e-mail solutions. Worldwide, thousands of security-oriented companies, of all sizes and from all fields, rely on SEPP-mail's multiple award-winning products.

We are an owner-managed, independent company. A cautious business strategy ensures our independence for the long term. Our ethical values of openness, reliability and appreciation remain tangible and visible across all our business activities.
